

EuraCOM BlueBox[®] pro

Make phone calls and be available via your PBX system and GSM net

Switch your home system per mobile

Record mobile conversations by the use of any recording device

Switch PBX functions per mobile

Mobile telephony & landline simply connected!

The perfect communication solution:

The BlueBox pro provides the perfect solution for your office. The registration procedure takes place on the BlueBox pro, which is connected to an analogue extension of your PBX system. Incoming mobile phone calls can be transferred to every extension of your PBX. Outgoing calls via GSM net can also be made from every extension. The only requirement is, that the BlueBox pro needs to be connected to a free analogue PBX extension. Until now, this solution was only possible by using expensive equipment which always needed an additional SIM card. With the BlueBox pro you are supplied with full telephone comfort. Reception fluctuations indoors are things of the past.

Whether you want to register a prepaid mobile to provide a permanent availability - also on several extensions - or you want to register your business mobile manually every now and then, it doesn't matter. You can also run several BlueBox devices parallel on several PBX extensions to make use of different applications. For sure, no extraneous mobile is able to register. The Bluetooth standard requires one-time registration by PIN confirmation to make your mobile entitled, only. From that moment the BlueBox pro detects your mobile automatically.

But you can use the EuraCOM BlueBox pro also integrate Skype into your existing PBX system. All you need is a EuraCOM BlueBox pro device and a Bluetooth enabled PC (e.g. USB dongle interface). Now PBX functions can be used for Skype calls, too!

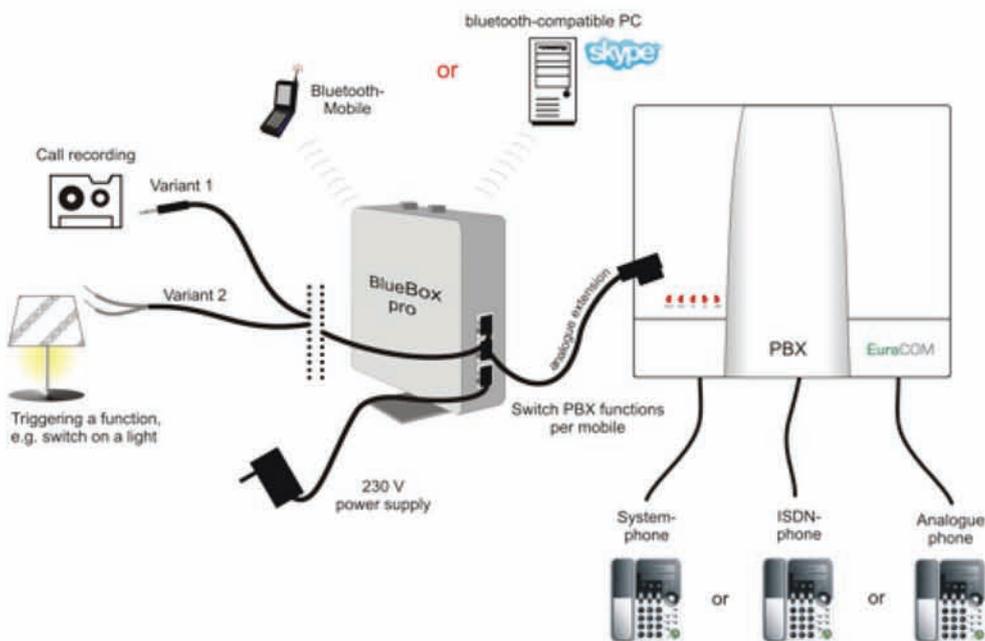

EuraCOM

Technics • Innovation • Future

M a d e i n G e r m a n y

Features:
